### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William Batzer on March 30, 2005.

2. The application has been amended as follows:

In claim 1, line 10, in the phrase "coupled to received reflected light of";

replace "of" with - -from- -

In claim 1, line 11, in the phrase "multiple transducers from the comb filter";

delete "from the comb filter"

In claim 10, line 1, in the phrase "measuring the value"; replace "the" with - -a- -

In claim 12, line 2, in the phrase "the free spectral range"; replace "the" with - -a- -

In claim 14, line 2, in the phrase "the processor"; replace "the" with - -a- -

In claim 17, line 1, in the phrase "setting the instantaneous"; replace "the" with - -an- -

In claim 17, line 3, in the phrase "analyzing the plurality"; replace "the" with - -a- -

### *Reasons for Allowance*

3. Claims 1-17 are allowed.

The following is an examiner's statement of reasons for allowance:

Art Unit: 2882

Regarding claim 1, prior art does not disclose or fairly suggest a system including wherein a sweeping comb filter and a wavelength division multiplexer are coupled together to receive and operate on reflected light from transducers, and wherein the sweeping comb filter has a wavelength separation between adjacent pass bands that is significantly less than the spectral range of the reflected light from the multiple transducers, in combination with all the limitations in the claim. Claims 2-9 and 13-16 are allowed by virtue of their dependency.

Regarding claim 10, prior art does not disclose or fairly suggest a method including applying optical comb filtering to light reflected from transducers to pass reflected light having multiple spectral portions, the spectral portions having wavelength separation that is significantly less than the spectral range of the wavelengths from the multiple transducers, and applying wavelength division multiplexing to the reflected light so as to separate the spectral portions, in combination with all the limitations in the claim. Claims 11, 12, and 17 are allowed by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Art Unit: 2882

***Conclusion***

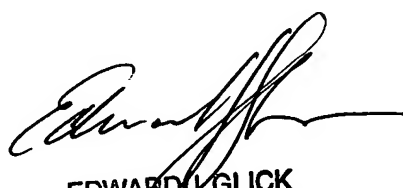

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patent 5397891 discloses a wavelength division multiplexer (fig. 35, #670) and filters (fig. 35, #622).
